• Delivers robust disease control targeting pythium, rhizoctonia, fusarium and early season control of chewing and sucking pests.
• Provides 5 active ingredients that deliver robust seed and seedling disease control along with early season insect protection from chewing and sucking pests.
• Robust rate of insecticide for low to medium pressure wireworm.
• Developed with 2 fungicide modes of action (contact & systemic) to help deliver enhanced disease control.

Stamina® F4 Cereals
Fungicide Seed Treatment

Stamina F4 Cereals provides broad-spectrum disease control, against a wide range of wheat and barley pathogens, including Rhizoctonia root rot, Fusarium seed rot and seedling blight, common root rot, dry seed decay, Pythium damping off, common bunt of wheat and covered smut of barley.

STEPUP™

STEPUP™ is a seed treatment nutrition that is specifically designed to interact with and respond to the seed by supplementing the protein and amino acids released during the early stages of germination, providing a faster and more uniform emergence, resulting in higher yields.
**Spring Wheat**

- **WB GUNNISON**
  - Great thrashability
  - Very good standability
  - Excellent yield potential
  - Best variety for heavy sawfly pressure

- **WB9668**
  - Excellent yield potential
  - Excellent yellow (stripe) rust resistance
  - Adapted mainly for irrigated ground
  - Short variety with strong straw

- **ALUM**
  - Very good yield potential
  - Works well in low pH soils/aluminum toxicity soils
  - Very good test weight and average protein

- **SY INGMAR**
  - Very good yield potential
  - Tillers well
  - Good in drought conditions

- **CORBIN**
  - Large area of adaptation
  - Light wheat stem sawfly tolerance
  - Very good yield potential
  - Best suited for dryland acres

- **WB 9719**
  - Excellent yield potential
  - Drought tolerant
  - Moderate sawfly tolerance
  - Excellent Hessian fly tolerance

---

**Forage**

- **LAVINA - HAY**
  - Good tonnage per acre
  - Suited for irrigated or dryland
  - Much improved grain yield vs. Haybet
  - Baronesse/Haybet cross

- **STOCKFORD - HAY**
  - 2-row hay barley
  - Known for its palatability
  - Better lodging resistance than Lavina

- **TRICAL SURGE**
  - Fully beardless spring triticale
  - Exceptional yield for silage and hay
  - Works well on dryland and irrigation

---

**Barley**

- **HOCKETT**
  - High yield potential for dryland
  - Great test weight and plumps
  - Holds low protein over stressful conditions
  - Narrower end use range vs. AC Metcalfe

- **AC METCALFE**
  - Large area of adaptation
  - Most widely contracted variety
  - Great malting characteristics
  - Disease free

- **CLAYMORE - FEED**
  - Great yield potential (Champion replacement)
  - Great standability
  - Good disease package

---

**Durum**

- **ALZADA**
  - Excellent yield potential
  - Excellent gluten strength
  - Early maturing
  - Premium contracted Durum

---

**Canola**

- **Cibus**
- **BrettYoung**
- **Invigor Liberty Link**

---

**Clearfield® Production System**

- **NS PRESSER CLP**
  - Excellent yield potential
  - Clearfield® Plus Technology (2 gene)
  - Vida background

- **WB 9879 CLP**
  - Solid stem for sawfly management
  - Clearfield® Plus Technology (2 gene)
  - Excellent standability
  - Very good yield potential
